

# WOOD SAVING STUDY FOR EVERY PERCENTAGE INCREASE IN YIELD

---

Calculation hypothesis:

- Device with 8 kW nominal power
- Operating daily during 12 hours for 5 months (complete winter)
- Firewood price at 0.345 € / kg

The results of this study show the following data:

- Savings due to 1% increase in performance: € 15.15 per season
- Savings due to 10 % increase in performance: € 151.15 per season
- This represents a saving of more than 750 euros in five years
